

Fall Research Fair is almost here!!

New members, open labs, and everything you need to walk into your first research conversation with confidence.

Lead story

Your guide to the Fall Research Fair

Once a year, professors from across UTSC open their lab doors in one room, and this is the month it happens.

Whether you have never set foot in a lab or already know your field, the fair is built for a first conversation.

Over fifteen labs will be on hand, from environmental science to cognitive

psychology. Each table has a student ambassador, so you never have to walk up to a professor cold.

Not sure what to ask? Turn to page two for a starter script, then come find ARISE at the welcome desk for a map and a conversation buddy.

At a glance

WHEN

Wednesday, October 22

TIME

12:00 to 4:00 PM

WHERE

Main atrium, UTSC

COST

Free, drop in

Meet the labs

Three professors, one question

We asked each one what they wish undergraduates knew before knocking on their door.

Curiosity beats a perfect transcript. Tell me what you want to find out.

LS

Professor, Life Sciences

Ecology and field methods

PS

Professor, Psychology

Memory and attention

AK

Student spotlight

From first-year curiosity to a published poster

A third-year biology student shares how one email in October turned into a summer position, and what she would tell her first-year self.

Her tip: Read one paper from the lab before you write. Mention it in the first line.

How to**Write your first email to a professor****1**

Open with one specific detail from their recent work, not a general compliment.

2

Say who you are and what you can offer: your year, your courses, your hours.

3

Make a small ask. A fifteen minute chat is easier to say yes to than a position.
